Java

```java
class Solution {
    public String rankTeams(String[] votes) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string[]} votes
 * @return {string}
 */
var rankTeams = function(votes) {

};
```

TypeScript

```typescript
function rankTeams(votes: string[]): string {

};
```

C++

```cpp
class Solution {
public:
```

```cpp
    string rankTeams(vector<string>& votes) {

    }
};
```

C#

```csharp
public class Solution {
    public string RankTeams(string[] votes) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun rankTeams(votes: Array<String>): String {

    }
}
```
